

FreeTEL System Releases the FTS-G100 VoIP Gateway with Dual Service VoIP and PSTN

Newswire Today - /newswire/ - Whitman, MA, United States, 06/09/2006 - FreeTEL System, the Global Internet Telephone Provider, today announced its new product allowing consumers to use Internet Telephone Service (VoIP) and local PSTN Service in the same analog phone.

"Unlike devices offered by other service providers, FreeTEL System's FTS-G100 will ring the phone whenever there is either an incoming Internet call (VoIP) or local PSTN call (Regular). The free Internet telephone experience remains the same, in that user can make free Internet calls anytime and anywhere, and to non-Internet calls through the local PSTN service as normal. The device is ready out-of-the-box to use and require no additional setting including entering username and password. We are extremely proud to deliver the most convenient and advance device enabling customers to enjoy both VoIP and PSTN service in the same phone." says Mr. Nghia Tran, President and General Manager of FreeTEL System – Vietnam.

"Since Internet phone services are offered by many providers, consumers have various choices; they tend to look for simplicity and style of the devices being used. The palm size FTS-G100 has a perfect style and size for those who want to use at home or even travel with it. We believe that the innovative design and features will help consumers to take real advantage of VoIP technology." says Mr. Hieu Ho, Vice President and Chief Technology Officer of SupraLink Solutions.

"The forecast of 20 million U.S. households will subscribe to some form of Internet telephone service by 2010 is an effective force for providers to improve their services. With FreeTEL System advanced service, customers can travel with their FTS-G100 device. Wherever they go, whenever they want, the FTS-G100 can help them to call home free of charge." says Mr. Tim Nguyen, Vice President of Solutions Network.
